

1. Open your web browser and go to usevia.app
2. Click on the “SETTINGS” tab at the top of the window

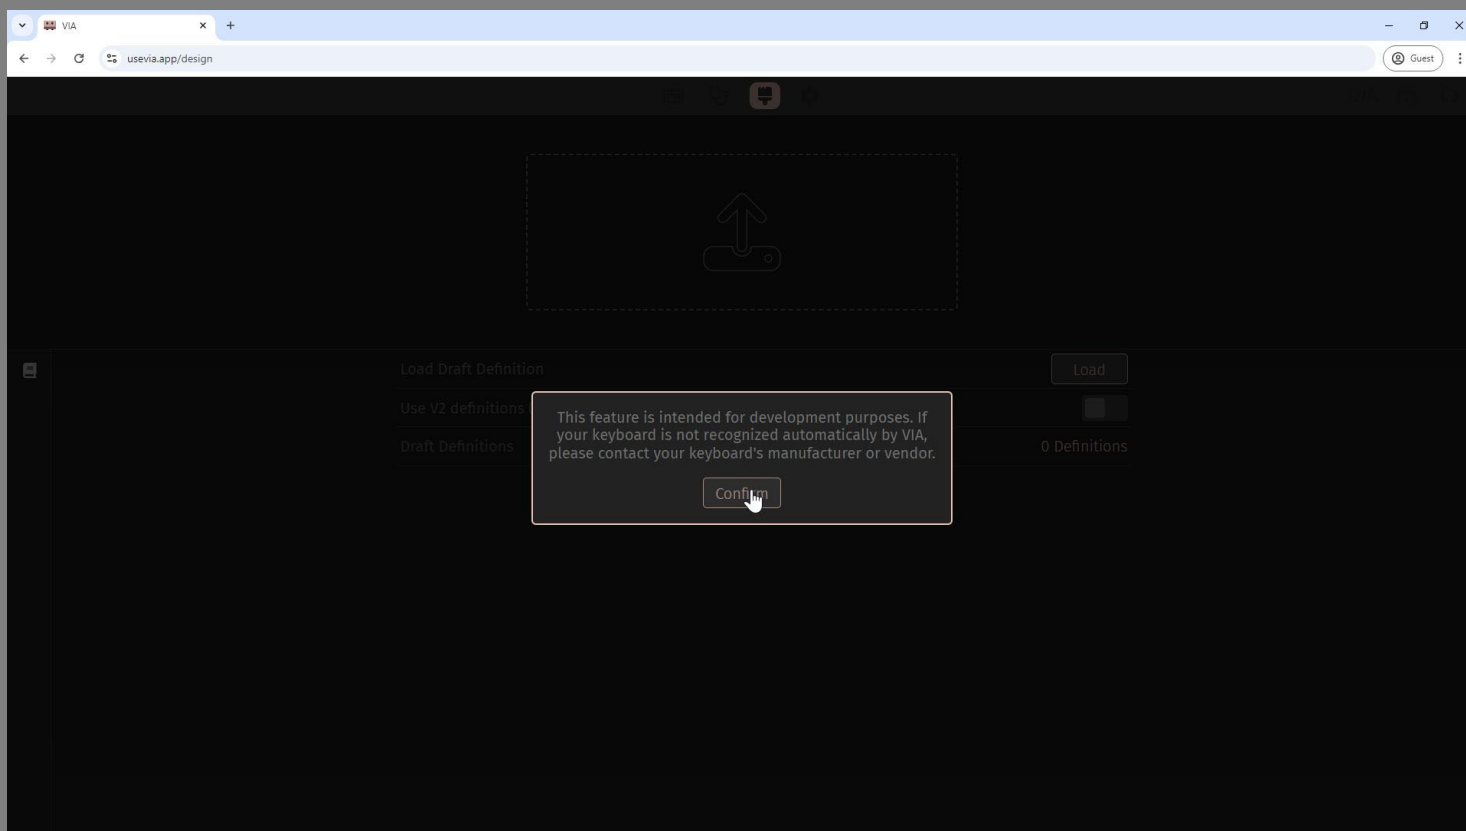

3. Click the “Show Design tab” toggle to turn it on

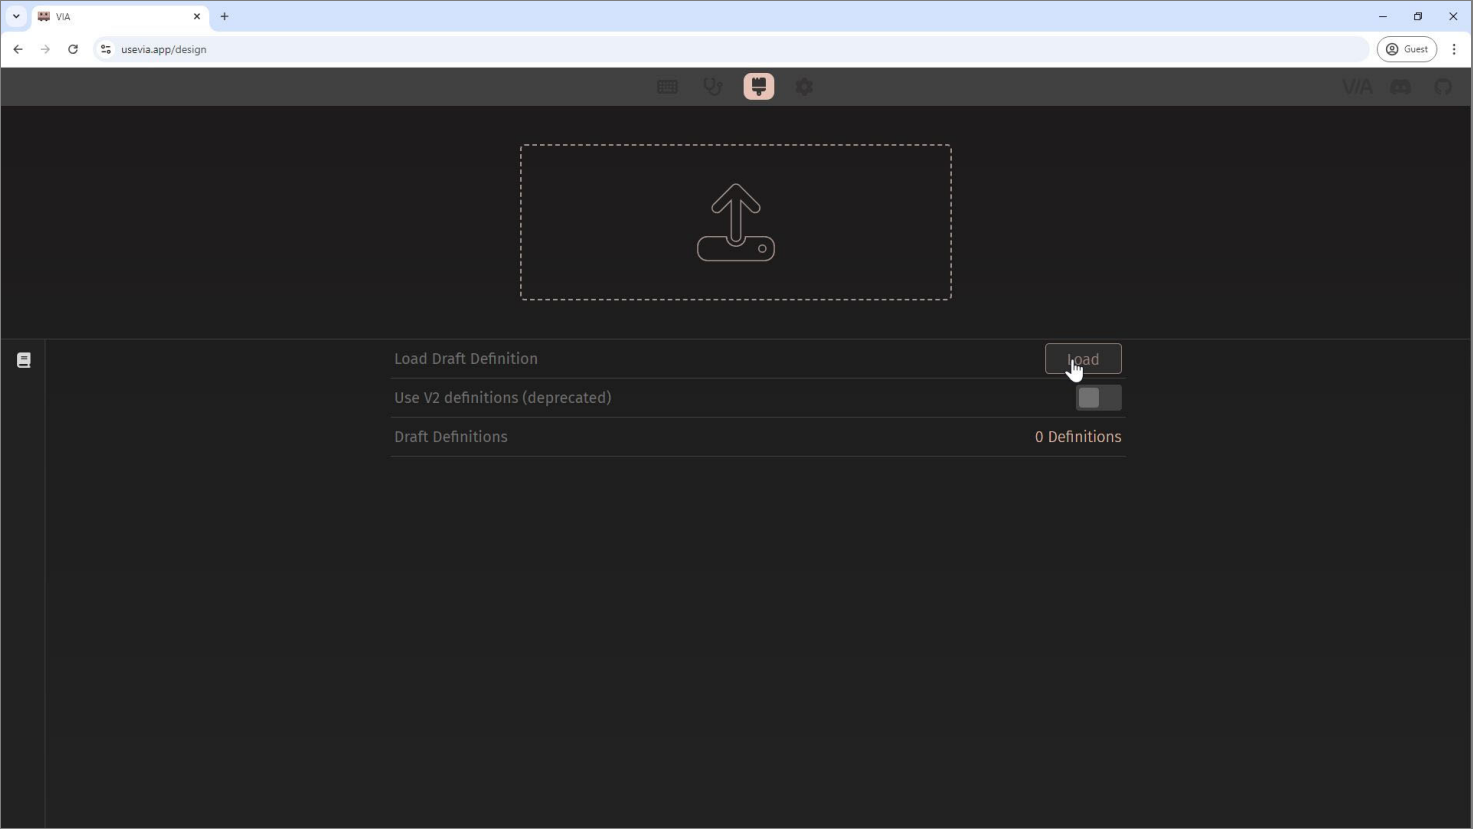

4. Click on the “DESIGN” tab which should now be visible at the top of the window

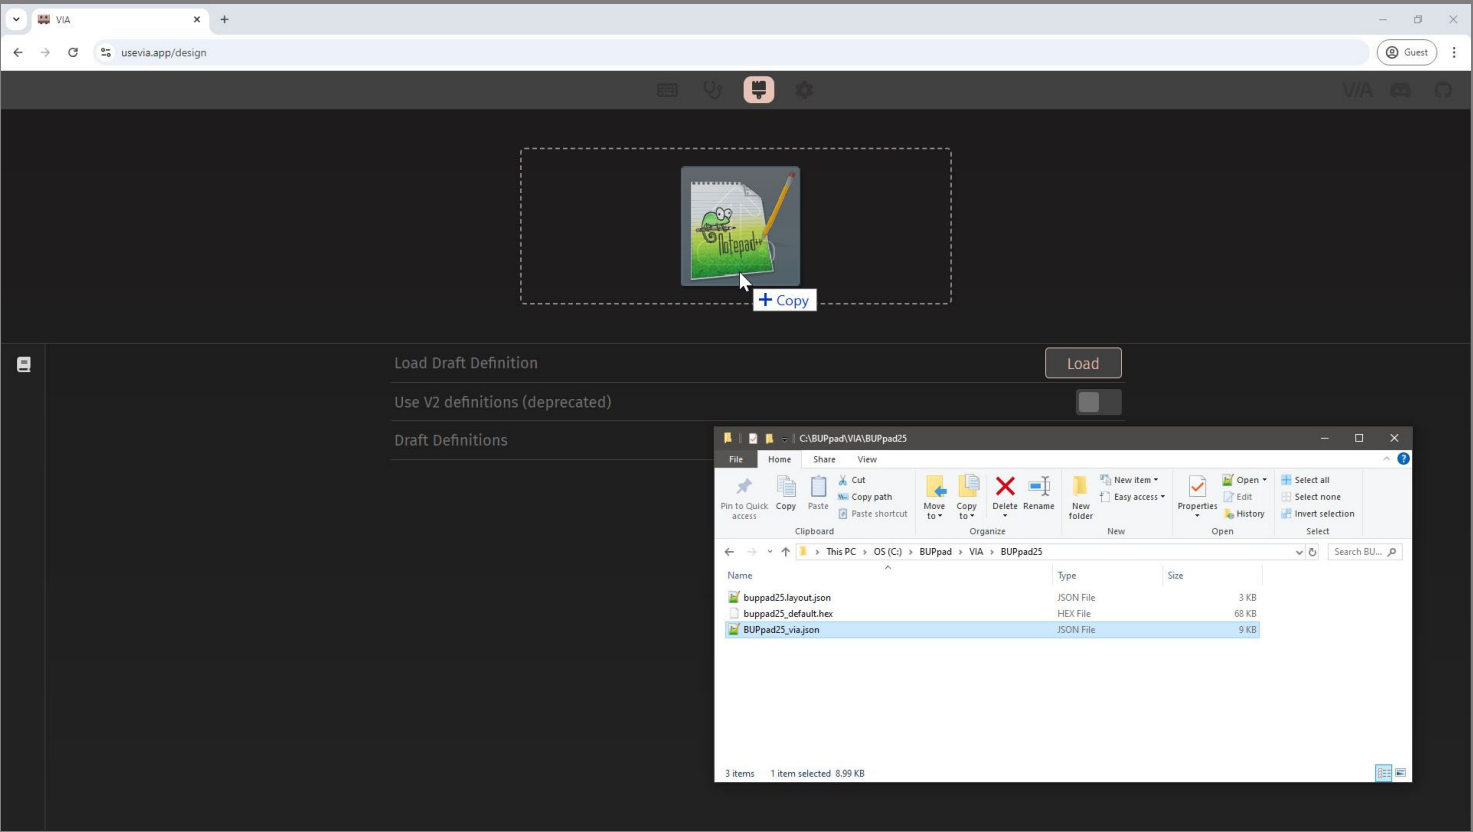

5. Click “Confirm” if prompted

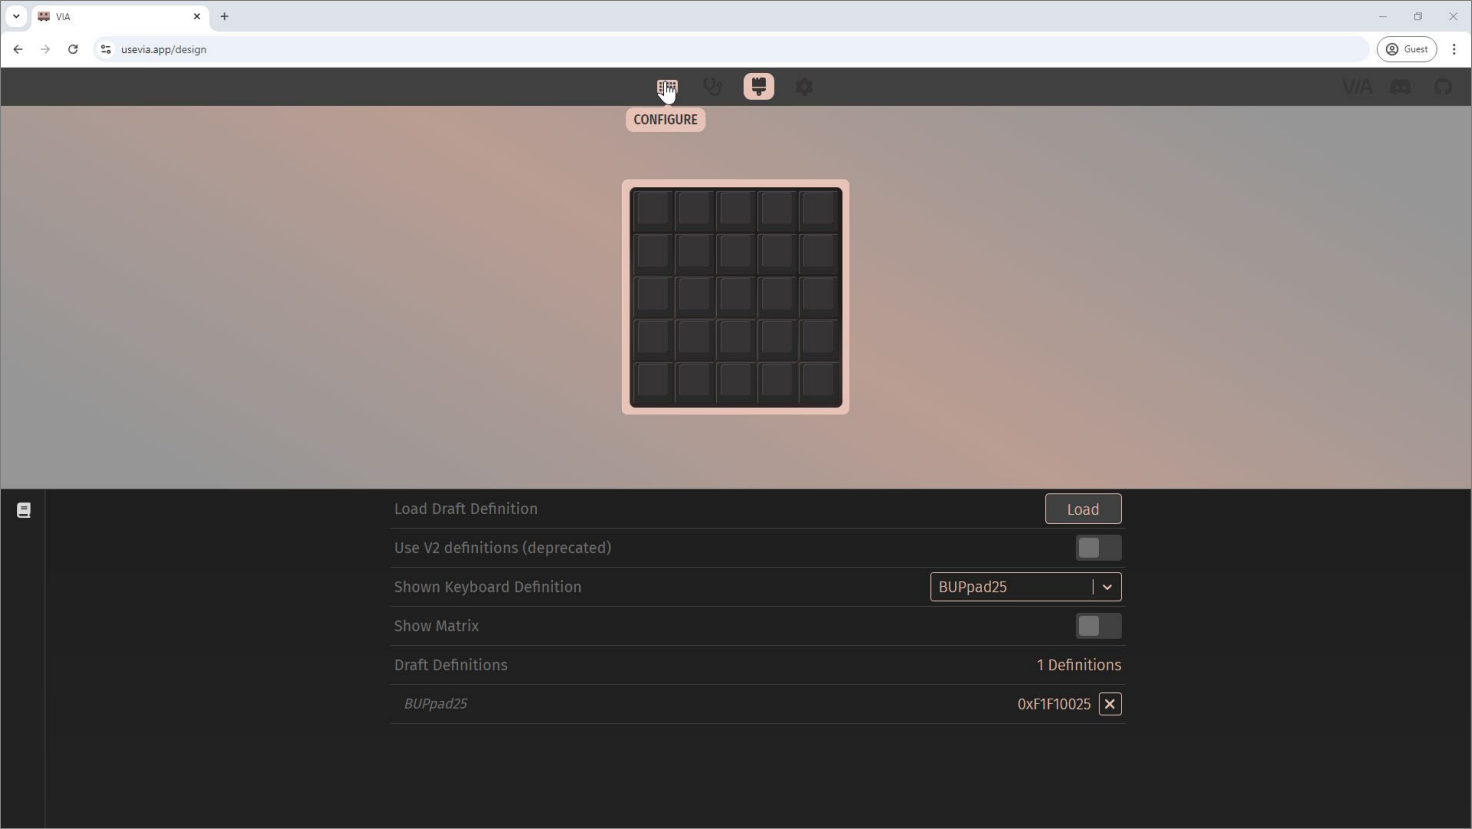

6a. Click on the “Load” button and navigate to the via definition .json file for your keyboard

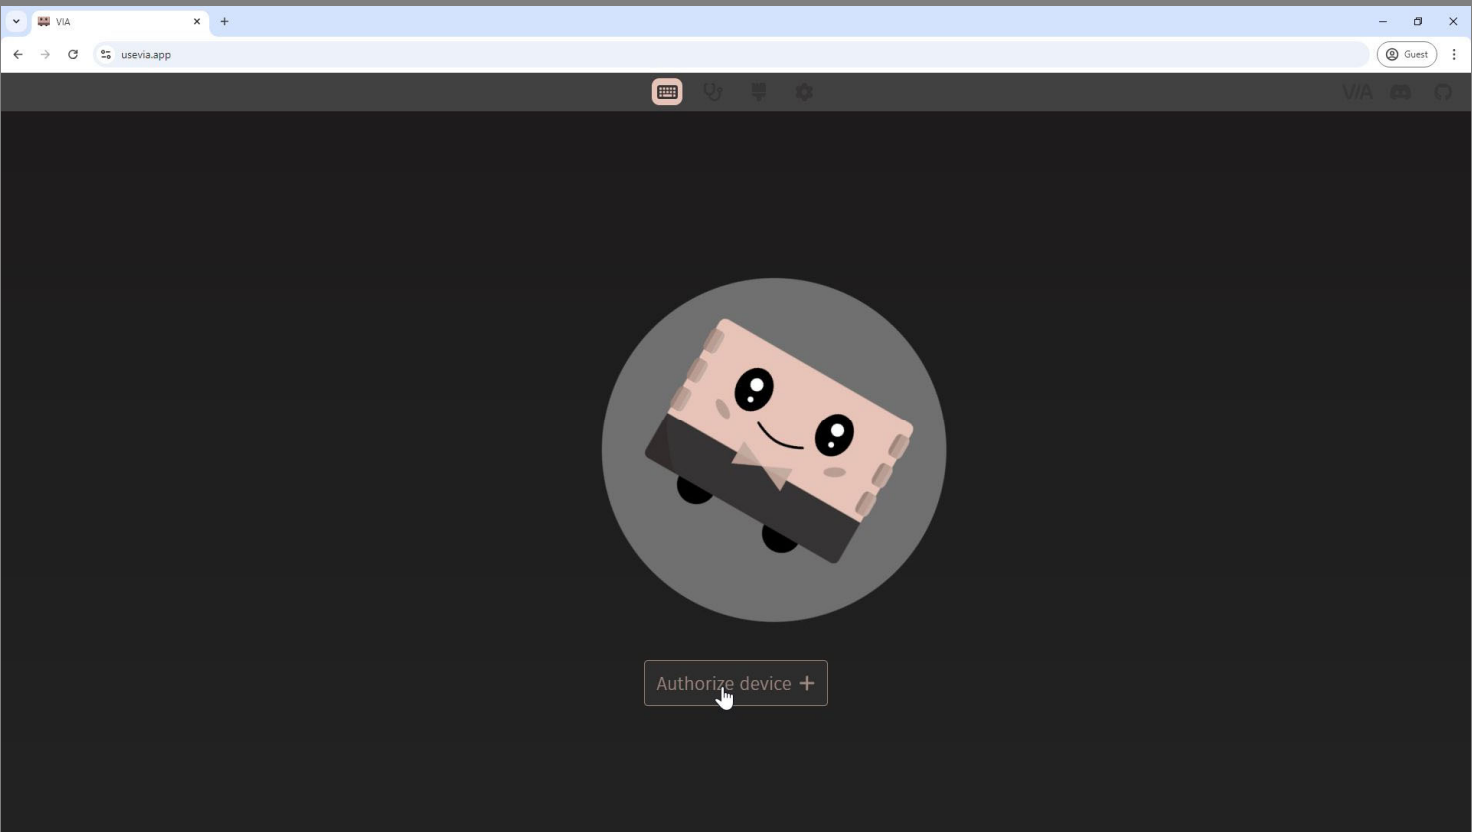

6b. You can also drag and drop the file from your file explorer into the box to load it

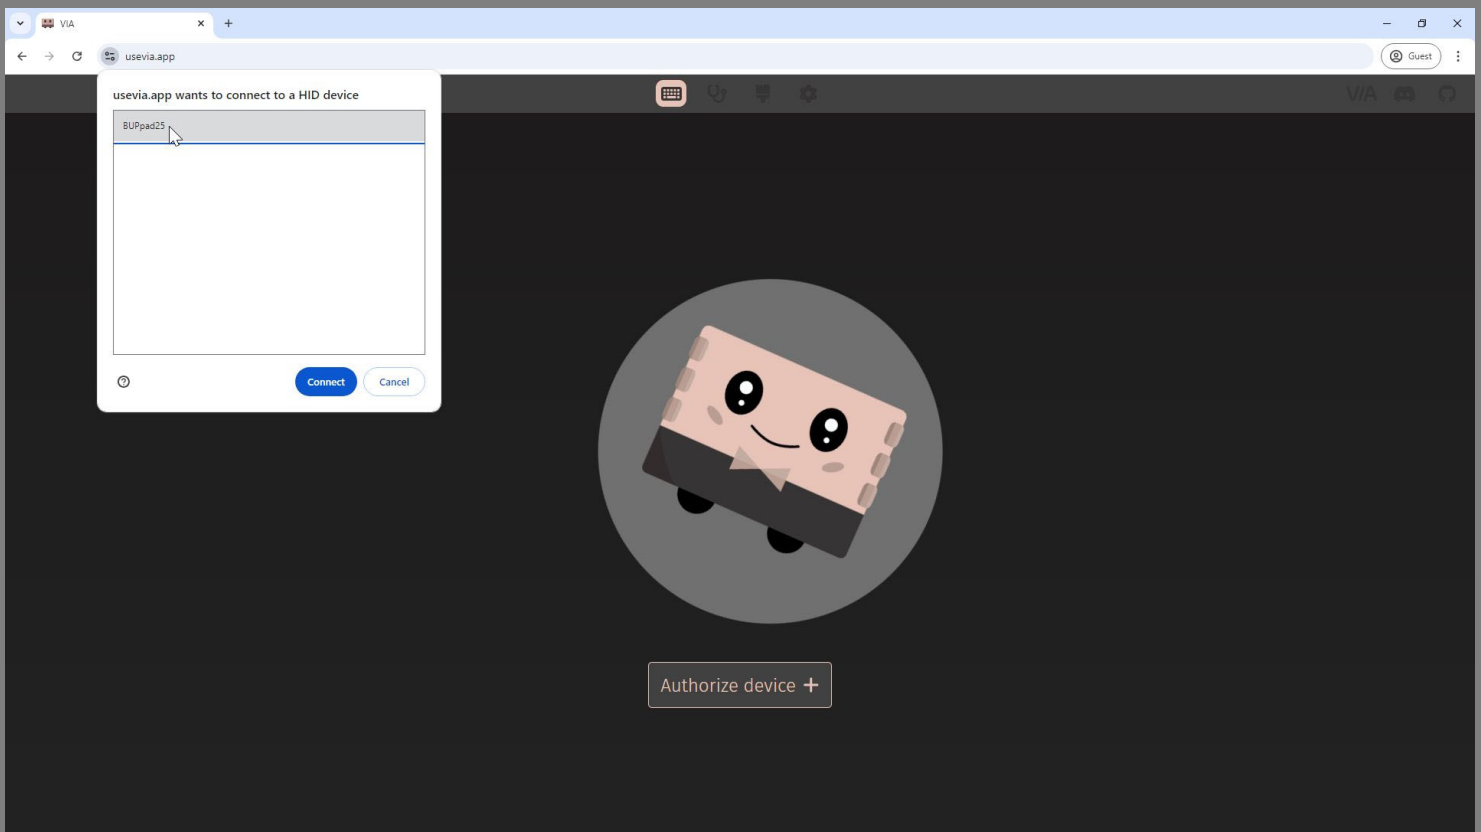

7. Click the “CONFIGURE” tab at the top of the window

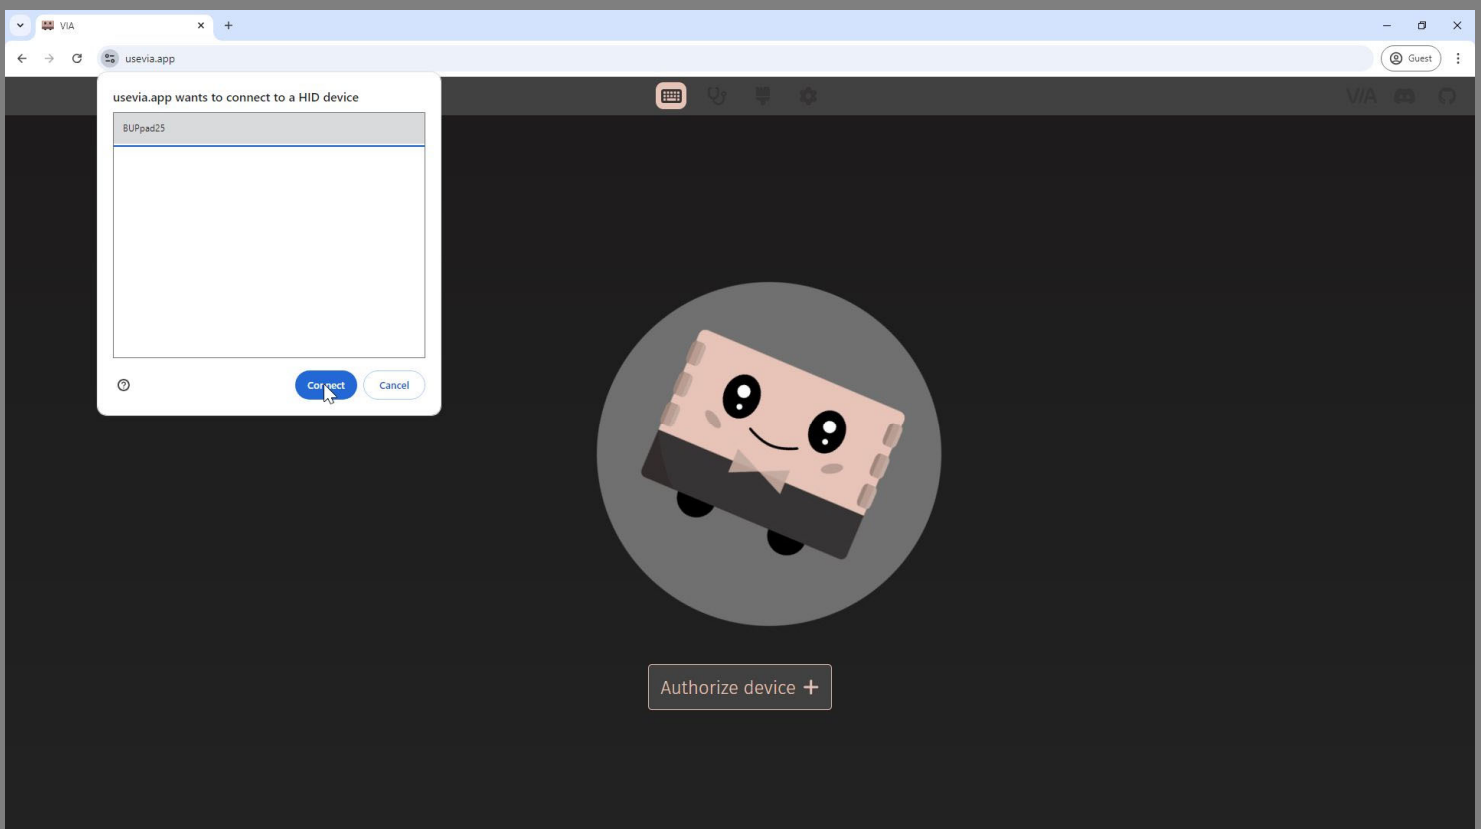

8. Click “Authorize device”

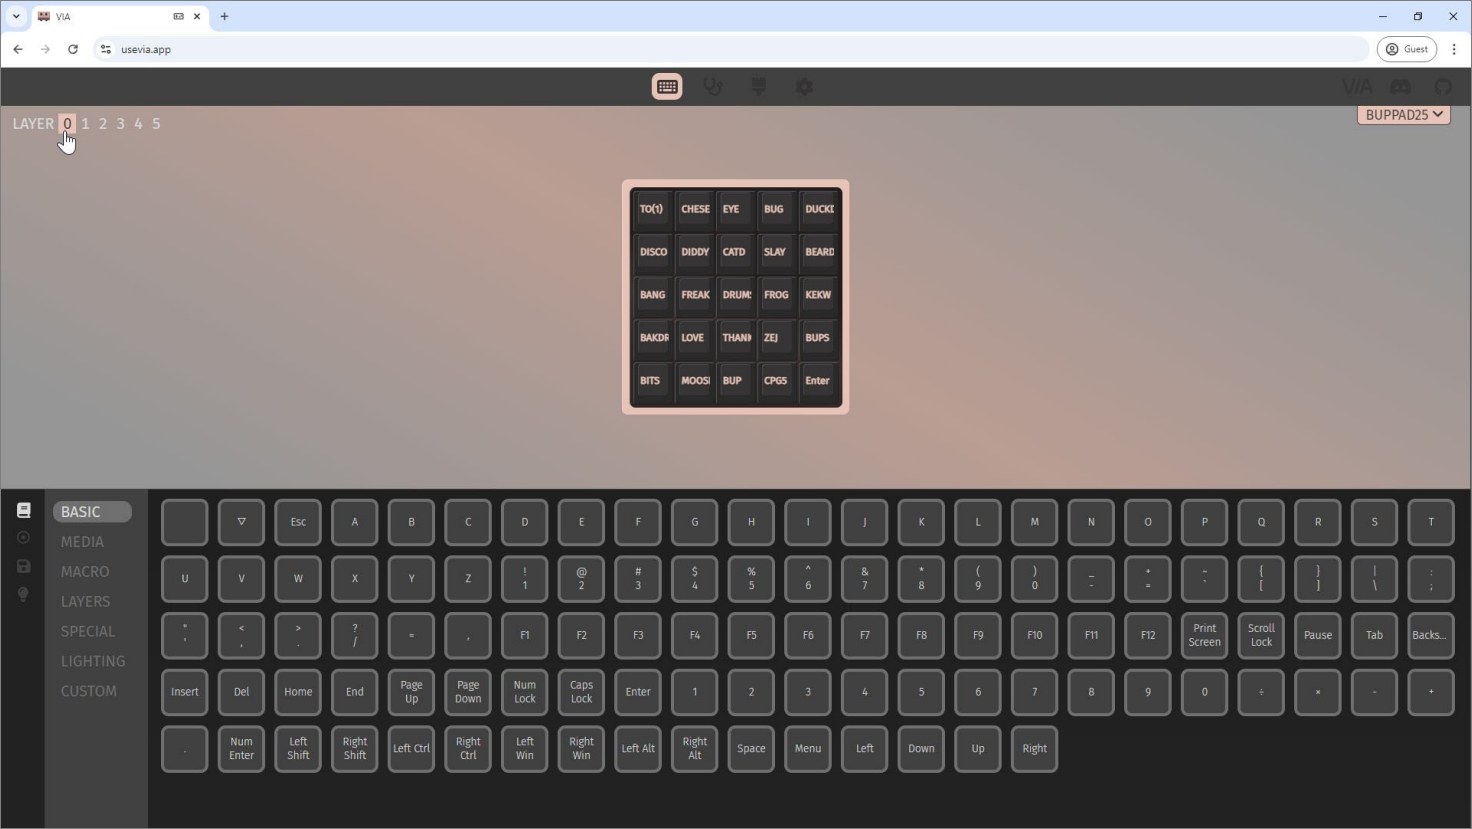

9. Select your keyboard from the pop-up menu

10. Click "Connect"

11. You're all set! Your keyboard is now ready to be configured in real-time.
The remainder of this guide will simply be a more detailed explanation of the VIA configurator options

10. Click “Connect”
